Aid for Trade project in Central Asia

Green product export space

Vision

Identify sustainable, labour intensive products with a high export capability;

UNCTADs Green Product Space methodology to identify competitiveness;

- Product comparative advantage for exporting;
- Identify products that are deemed green using the WTO core group of green goods.

In addition, UNDP will use the following layers to identify labour intensive products:

- Labour intensive value chains;

Which products

Products that have demonstrated:

1. High comparative advantage for exporting;
2. Products that are green and including but not limited to technologies;
3. Products that are labour intensive to ensure social inclusion and a good impact spread.

Why

- Support countries in positioning themselves on global markets;
- Support sustainable diversification of the economy;
- Support economic growth through a sustainable development lens;
- Ensuring that countries profit from the increasing opportunities in green trade.
